

Sustainable Technologies

FARM SERVICES

Receive 30% Renewable Energy Tax Credit for all Energy Efficiency Upgrades and Renewable Energy Projects

Sustainable Technologies offers energy audits, off-grid and hybrid ground-mounted solar power systems, solar pumping systems, & variable frequency drives for farms.

One of the largest expenses in agriculture is electricity. With the increase in the cost of electric power for the ag sector, it's more important than ever to use energy efficiently.

Two areas where farms can easily save money are pumping and refrigeration. We can look at your farm operation to see where energy is consumed and how money can be saved with energy efficiency upgrades. 85% of the cost of a pump or compressor is not the purchase cost but the energy used in their lifetime.

Whether you're produce crops, dairy or livestock, we can help you harness energy from the sun for clean, economical solutions

- Ground Mounted Solar
- 3-Phase Solar Pumping Systems
- Energy Audits
- Variable Frequency Drives
- Off-Grid / Hybrid Power

Funding Available!

State & Federal Grants are available. We have experience with the application process and can make it easy for you to fund your project.

Sustainable Technologies

is an environmental energy company providing design and installation of efficient remediation and solar electrical systems. We are environmental professionals sharing the common goal of creating alternatives for a sustainable future. We are one of the top 500 solar contractors in the nation with 20 years of experience.

GO Green!

Install a Variable Frequency Drive (VFD) on your well and your booster pumps and save over \$1,000 a year (and 2.5 Tons of carbon!)
